

Insulated Tube Set 保温连接管

Insulated tube sets are ideal connection lines between the outer part (condenser) and the inner part (evaporator) in split-system air-conditioning units.

The tubing is covered with close-cell PE foam with reduces refrigeration and heating energy losses. A PE film with high resistance to steam diffusion prevents condensation entering the insulation layer, which ensures the long-term insulating effect.

保温连接管对于分体式制冷系统是非常理想的连接管。连接管表面覆盖的高密度 PE 泡棉可以有效降低管路中制冷剂冷量（热量）的散失。最表面的 PE 覆膜具有防水作用，保护保温层不受冷凝水的侵蚀，延长使用寿命。
